Vim study report

Many people said that Vim is a very powerful editor. After I study it, I see its power. If you use vim to code, you needn't a mouse and only a keyboard can do anything you want. Vim has many shortcut keys, which improve your speed to code. Of course, it depends on your degree of familiarity with vim. The first time I study vim, I am not accustomed its operation, especially it use hljk to move the cursor.

Java study report

I had study Java in the winner vocation, mainly its grammar and its usage, but not Java GUI. In this term, I learnd C# and cocos2d, both have GUI. So I learn Java GUI quickly.

Ant study report

This is the first time I hear Ant. It's similar with makefile, it use the language XML, which is similar with HTML, and I can write a bulid.xml quickly after I learn the grammar of Ant. When I run the build.xml with ant, my program will exit quickly. Finally I add a attribute fork="true" in

which will create a new process to run the program and it

will exit quickly.

Junit study report

JUnit is a simple framework to write repeatable tests. It is an instance of the Unit architecture for unit testing frameworks. It's powerful to test Java program, but it's principle I am not really unstanding.
